

Inspirata Dynamyx™ – The ‘open’ digital pathology solution

Partner Spotlight: CliniSys

Dynamyx™ from Inspirata affords an ‘open’ architecture purposely designed to enable healthcare providers to arrive at their preferred blend of laboratory and diagnostic technologies. This partner spotlight explores Inspirata’s technical partnership with CliniSys and the seamless integration of its Laboratory Information Management System (LIMS), WinPath with Dynamyx™

Inspirata and CliniSys

Dynamyx™ and CliniSys WinPath integrate via standardised Health Level 7 (HL7) connectivity to provide laboratories with the following benefits:

- An end-to-end, fully flexible digitised pathology workflow enabling wholesale adoption of lean methodology for case execution.
- Full visibility of case progression, together with best-in-class BI tools to ensure cases are efficiently and effectively compiled and allocated according to patient priorities and laboratory targets.
- Facilitation of multi-site, networked pathology services in line with Carter Report recommendations and negating the need for significant uprooting of human resources
- Cross-functional MDT support inclusive of both images and reporting.

- Improved quality assurance and advanced case traceability through comprehensive audit trail functionality.
- Real-time transparency into the case-workload for individual and aggregate pathologists enabling improved forecasting of backlogs and bottlenecks.

About WinPath

CliniSys' market leading LIMS, WinPath, has been designed to support the evolving workflows observed as a result of the increased requirement for multi-site pathology services, remote workforce servicing hubs and essential service laboratories. WinPath provides an essential integration with Inspirata's intelligent workflow software ensuring that patient demographics and supporting notes are recorded and appended in context with case images, and in doing so, improving data governance, quality and patient safety.

Utilisation of Inspirata in conjunction with CliniSys LIMS also serves to address an increased call to share, review, save and then link images to the hospital infrastructure in line with the principles of inter-operable IT connectivity highlighted in Lord Carter's report as essential in the drive towards greater laboratory efficiency.

CliniSys: Solutions designed to meet the evolving needs of NHS networks.

About CliniSys

As the leading European Laboratory Information Management System supplier, CliniSys provides strategically aligned and future proofed systems meeting the latest requirements of pathology. We have built up a wealth of domain knowledge over our 30 years' experience in developing and successfully deploying healthcare IT solution; unmatched in the marketplace.

Interoperability in pathology is vital and our solutions enable standardised and simple connectivity to essential platforms delivering digital pathology. We are already supporting our customers in employing emerging new digital pathology workflows while maintaining data governance with linking imagery to the patient record.

In order to accommodate the nuanced requirements of each and every customer, Inspirata is committed to an 'open' and integrated digital pathology model in which it will work with all relevant providers touching the digital pathology workflow. To learn of Inspirata's other technical partnerships or to explore how your organisation might also become an approved Inspirata digital pathology partner, contact partners@inspirata.com

Dynamyx is CE-marked per Annex III of Directive 98/79/EC on in vitro diagnostic medical devices
