Inspired Diagnosis by Inspirata – The ‘open’ digital pathology solution

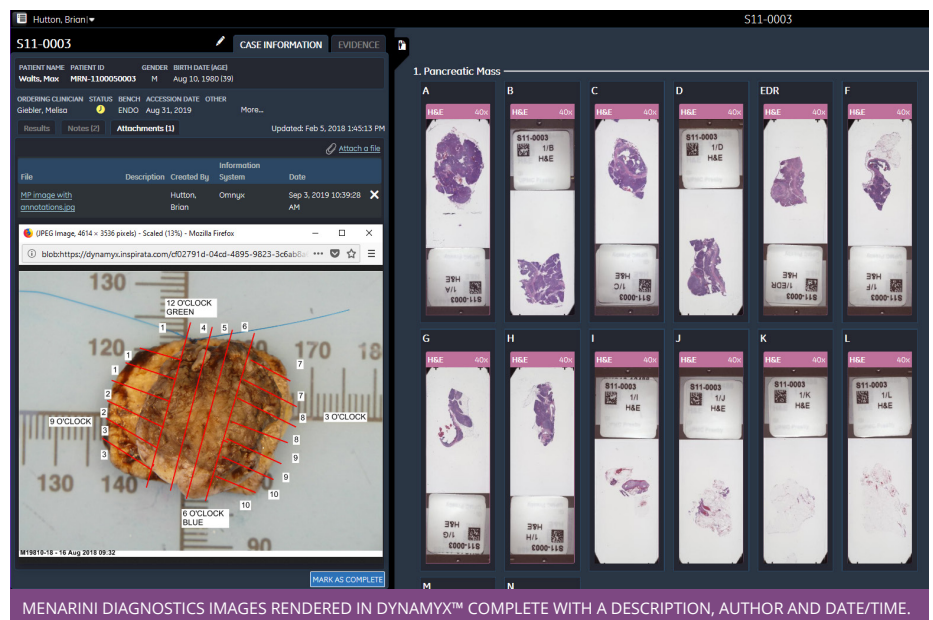

Partner Spotlight: Menarini Diagnostics Digital Dissection Management™

Inspired diagnosis from Inspirata affords an ‘open’ architecture purposely designed to enable healthcare providers to arrive at their preferred blend of laboratory and diagnostic technologies. This partner spotlight explores Inspirata’s technical partnership with Menarini Diagnostics and the seamless integration into Inspirata’s digital pathology platform of images derived from Menarini’s Digital Dissection Management™ solutions.

Inspirata and Menarini Diagnostics

Shared Inspirata and Menarini Diagnostics MacroPATH customers can draw on key images taken during macro-dissection directly within Inspirata’s digital pathology solutions, introducing the following laboratory benefits:

- Greater confidence in diagnosis as the pathologist is afforded a more easily-accessible and full diagnostic picture of the case at hand.
- Accelerated case turnaround times as end-to-end digitisation further supports laboratory LEAN workflow methodologies.
- Reduction in the risk of manual errors caused by more analogue approaches in which paper print-outs are manually appended to the case.
- Improved usability as the pathologist is no longer required to interrupt the workflow to toggle between different applications in order to access images.

Menarini Diagnostics and Digital Pathology

Menarini Diagnostics has been delivering digital pathology solutions to clinical and research laboratories for over twenty years. We have achieved a reputation for the best in class image quality. Our latest additions to the portfolio are the MacroPATH QX for macro digital imaging at the dissection area and the NAVIGO Premium digital microscope for tissue slides. Our MacroPATH and NAVIGO solutions will enable clinicians to work remotely and in real time, providing full traceability of the macro and micro images for final diagnosis. This is of particular benefit for intraoperative consultation and second opinions.

About Menarini

Menarini Diagnostics has been established for over thirty years in the UK and is within the top ten in-vitro diagnostics companies in Europe. We bring to the market innovative technologies to increase the accuracy and speed of cancer diagnosis in the laboratory. Our focus is on shortening the patient diagnostic pathway while increasing the information value of the results. We offer the most comprehensive range of products within the field of Cellular Pathology. The Total Tissue Diagnostics™ range starts at specimen handling within theatres and runs all the way through to digitally assisted diagnosis. It comprises of innovative instrumentation together with a state-of-the-art LIMS and tracking software solution.

In order to accommodate the nuanced requirements of each and every customer, Inspirata is committed to an 'open' and integrated digital pathology model in which they will work with all relevant providers touching the digital pathology workflow. To learn of Inspirata's other technical partnerships or to explore how your organisation might also become an approved Inspirata digital pathology partner, contact partners@inspirata.com.

Dynamyx is CE-marked per Annex III of Directive 98/79/EC on in vitro diagnostic medical device

MacroPATH is CE-marked per Directive 98/79/EC, 2014/35/EC and 2011/65/EC
